

## Freebox goes Wi-Fi and becomes a router!

*Free simplifies its customers' connections using the Freebox v3 by allowing them to connect to the network through Wi-Fi and share their Internet connection free of charge*

All subscribers using the Freebox v3, whether in unbundled or bundled zones, can now have cordless, secure Internet connection and share their connection.

The Wi-Fi function allows secure, cordless high speed Internet connection between the Freebox and the computer but also, using the modem's router function, this Internet access can be shared between several terminals using the same connection.

The router function allows free connection of several computers via Ethernet or Wi-Fi or even USB on the Freebox and allows them simultaneous connection to the Internet.

In this way, Freebox facilitates connection of its customers, in particular those whose PC and TV are not in the same room, or who have several computers and wish to network them.

To benefit from the Wi-Fi function, just order a PCMCIA card from the [www.free.fr](http://www.free.fr) website which will adapt to the Freebox. This card will be invoiced € 27 inc. VAT (debited in three € 9 monthly payments with the next three Free High Speed invoices). Workstations connected through Wi-Fi should be fitted with a Wi-Fi adaptor meeting the 802.11.b standard.

To activate and configure the router function of the Freebox on the Free website, users should go to <http://adsl.free.fr/admin/routeur.html> . This function is free of charge.

Free is the first IP to provide a multiservice offer with very high speed Internet (up to 5 Mbit/s in unbundled zones) with router and Wi-Fi functions, free unlimited telephony in mainland France as well as a TV service on ADSL (over 100 channels) in digital quality.

### About Free

Free is a subsidiary of the Iliad Group.

The Iliad Group is a major player in the French Internet access and telecommunications market with Free (second ranking IP, operator holding L 33-1 and L 34-1 licenses), One.Tel (fixed telephony operator) and Kertel (pre-paid cards). Created in 1991, the Iliad Group now employs 550 people. It is one of the last independent group sin the telecommunications sector. The Iliad Group is listed on the *Premier Marché* of Euronext Paris under the ILD symbol and is listed on the Next 150 and SBF 250 indexes.
