## Free opens the World's largest Wifi community network with 3 million Wifi hotspots

Free opens the World's largest Wifi network with 3 million Wifi hotspots operating on installed Freebox HD.

This service enables all Free unbundled users to benefit from free internet access (included in their ADSL package) through these access points in unbundled areas.

This network is separated from Free users' private Wifi network. Unlike other initiatives, Freewifi is completely secured. Every Free user will connect to the community Wifi network via an appropriate IP address (*and not the IP address of the Freebox on which he is connected*). The secured access to FreeWifi will be provided through authentication on a web interface <http://wifi.free.fr> .

This service will thus enable Free users to benefit from an internet connection when they are not at home, for example on their holidays' places.

*Service available as experimental beta version subject to terms and conditions and accessible subject to subscribers residing in an area covered by the service.*

*In the event of their ADSL access being interrupted, this new service will provide Free users with an emergency internet connection.*

*Wifi transmission level < 0.5V/m at 0.5m Users can switch off Wifi on their subscription console.*

*Free is an Iliad subsidiary. The Iliad Group is a major player in the French Internet access and telecommunications market via Free and Alice (4,337,000 ADSL subscribers as of 31 March 2009), Onetel and Iliad Télécom (fixed telephony providers) and IFW (Wimax). The Iliad Group is listed on Euronext Paris under the ticker ILD.*
